

INSTRUCTIONS FOR MAINTENANCE OF T-SHIRTS

Thank you for choosing our promotional Vestax T-shirts. Please read this maintenance manual carefully. Here you will find important instructions, which you should follow. You will be satisfied with our t-shirt. The life of the T-shirt affects the way and intensity of use and may not be the same as the warranty period. If the T-shirt is used intensively, its service life may be significantly shorter than the warranty period. In such a case, the shorter service life of the product cannot be considered a defect and cannot be claimed as such. That's why we bring you tips on how to best take care of your advertising T-shirt so that it serves you as long as possible.

Dear Vestax customers,

for long-term durability of printed textiles, we recommend that you observe the following washing instructions:

Necessary procedure - important conditions for maintaining quality

- wash all textiles in 30°C warm water
- always wash separately from other textiles and do not soak the T-shirt before washing
- never iron the t-shirt over the motif (logo print) !
- take the T-shirt out of the washing machine immediately after washing - do not leave it wet together with other laundry
- do not use aggressive washing powders for washing, do not chemically clean or bleach textiles

Recommended procedure - tips for maintaining a long service life

- wash the T-shirt upside down, use gentle programs (usually marked ECO and the wash cycle does not exceed 60 minutes)
- if the T-shirt is sweaty, it should be immediately washed or rinsed in cold water to protect the fabric from the negative effects of aggressive sweat and to prevent stains
- drying in dryers is not recommended, do not dry in direct sunlight, on radiators or in a tumble dryer, but freely in the air
- if you have to iron the motif (logos), cover it with baking siliconized paper - always ironed on the reverse side !

care symbols
