

Simple solution for personal broadcasting

The PBS-4 is an easy to use all-in-one solution to broadcast live audio and live video content on the internet.

Multiple audio and video sources can be mixed together, and instantly streamed online towards a world wide audience.

The USB output feeds the mixed audio and video to your computer and streams your content to any live streaming service including Ustream, Justin.tv, Livestream and more.

PBS-4

WEB BROADCAST

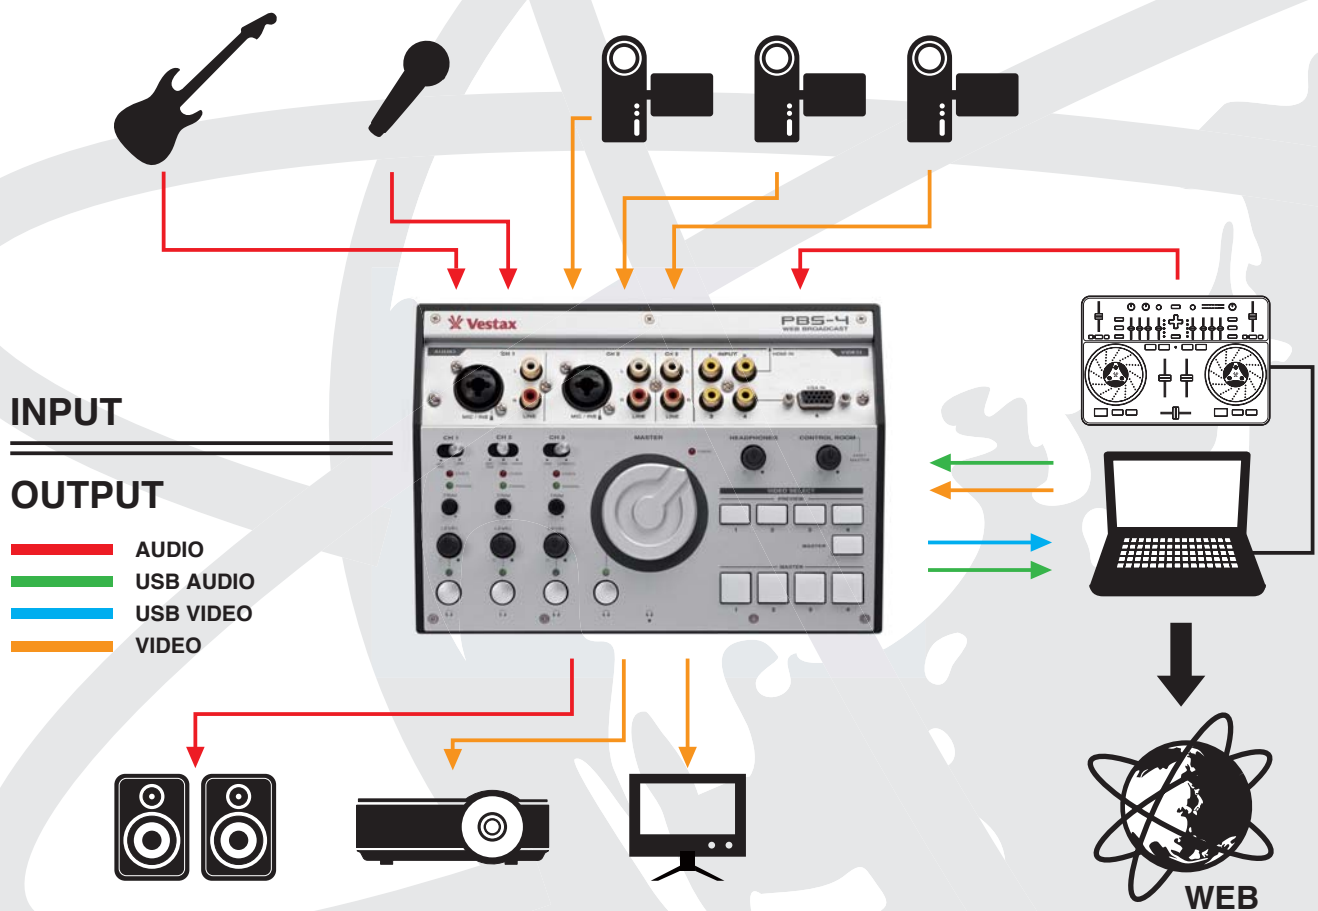

Simple solution for personal broadcasting

The PBS-4 is compact, travel friendly, and features a wide range of connections for your audio and video sources.

The simple interface and the quick setup features make the PBS-4 ideal for musical performances, live bands, Djs with video mixes, corporate events, seminars, e-learning, video game tutorials, church events, weddings, home TV studios, web radios and for any content you want to share live online.

The PBS-4 can also be used together with an audio and video capture software, to record your live content.
