FEATURES

> The torque characteristic performance DJs ask for requires powerful acceleration such like a racing car. On the other hand, the torque characteristic for long mixes and electronica requires being fluent, but able to delicately control the rotation. These 2 torque characteristics are absolutely incompatible. Vestax has digitally simulated these 2 different rotational characteristics full and complete, making the PDX-3000 the world's first turntable to have a torque simulator. With this new feature, there's no DJ style that can't be played.

> The new digital servo of the Controller One, known as the ultimate turntable, enables complete slave operation to the PDX-3000 via MIDI control. This allows MIDI connection with external devices such as sequencers and Faderboard's, to play synchronized or scaled sounds. A feature that will expand the possibility of the turntable.

> The PDX-3000 series is composed by the PDX-3000 with the original A.S.T.S straight arm and the PDX-3000mix with the new universal S arm. A selection to match the DJs style.

> Fast and accurate beat matching adjustment with a 100mm (3.93") $\pm 10\%$ fine pitch control fader, without the center indent. The fader movement on this new model has been tightened in order to allow smaller and more accurate pitch adjustments. The Ultra Pitch Fader controls the pitch range by $\pm 50\%$. Combined with the fine pitch fader, a total pitch control of $\pm 60\%$ is possible.

> For performance DJs it is important that the position of the turntable be as close to the mixer as possible. Thus the PDX models have a smooth rear face with recessed RCA connectors so that the turntable can be placed flat against the mixer (or each other).
