

V-MIDI

USB MIDI / CORE MIDI INTERFACE

V-MIDI is a compact, easy to use Core MIDI interface for musicians, producers, artists and performers that enables connection between USB MIDI hardware and apps for iPad, iPhone and iPod touch.

 **Vestax**

CONTROL. MONITOR. POWER.

IT'S SIMPLE

Simply connect your iPad, iPhone or iPod touch and your iOS device will automatically identify V-MIDI. Next connect any USB MIDI device to V-MIDI and then plug in the power. Run your CoreMIDI compatible app of choice and your set! It's easy as that. You can play music from apps with drum pads, MIDI synths, DJ controllers and more.

VARIETY OF APPS

There are currently more than 100 apps available on the App store compatible with CoreMIDI. Either it being for DAW, synths, drumming or DJing, there's plenty to choose from.

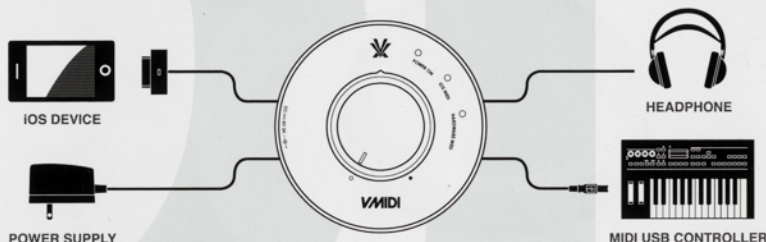

DUAL POWER

When you're in your "zone" playing music, time flies by. So does the battery of your iOS device. V-MIDI powers your iPad, iPhone or iPod touch, making sure you stay in your "zone". V-MIDI also powers a range of USB MIDI devices which require external power.

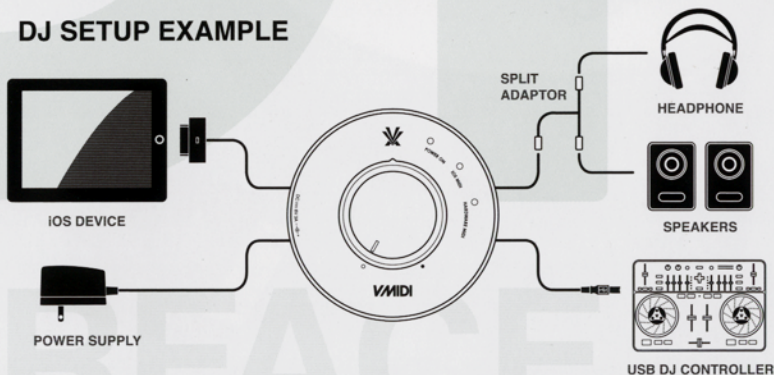

AMP YOUR APP

Audio output for iOS devices is limited to the headphone mini jack with small volume. This can be a problem if you want to record the output from the app. V-MIDI amplifies the audio from your iOS device and also enables volume control with the large scaled knob for a better monitoring and producing experience.

MUSIC SETUP EXAMPLE

DJ SETUP EXAMPLE

- Core MIDI in/out interface
- Connects to any USB MIDI device to control more than 100 CoreMIDI compatible apps available from the App store
- The only Core MIDI interface compatible with iPhone®, iPad® and iPod touch®
